

INSULATION JACKET FOR HISD, HSSD OR HIBC/B - HIJD

This insulation jacket has been designed to optimize the performance of the HISD, HSSD or IBC/B drum heater. It decreases the heat dissipation, reducing consumption and prolonging the heating effect of the drum heater even after it is turned off.

Designed for 200 / 210L drums and for IBC 1000L containers.

Thanks to the practical hook and loop fastening system, the installation is easy to perform.

It has a useful access to the upper part of the drum for picking up or filling material.

We also recommend the use of this jacket with the HBD base to reduce heating times and therefore save energy.

Useful for maintaining the temperature even on metal and plastic drums and after using the HSSD and HISD drum warmers.

CONSTRUCTION

It is made using polyester with flame retardant characteristics, polyester fiber insulation.

CHARACTERISTICS

ADVANTAGES

- Reduction of thermal dissipations
- Less drum heating time
- Ideal for 200l plastic or steel drums and IBC 1000L containers
- Robust and easy installation
- For temperatures up to 120 °C (versions for high temperatures available on request)
